

Fouls and cards by possession: Barcelona against teams at the same possession

Bins with at least 15 matches per group; bars show where each group's matches sit. Poisson elasticity of fouls against the team with respect to opponent possession: 0.25 [0.21, 0.28]; fouls against the opponent w.r.t. own possession: 0.24 [0.21, 0.27]

Means with unclustered 95% intervals, descriptive only; same-match possession responds to decisions. Common sample as in the ladder figure. Elasticities from Poisson regressions with season, opponent and win-probability FE; season-cluster CIs. Sources: ESPN, football-data.co.uk.
